EDUCATION

Masters, Computer Science, Arizona State University | GPA 3.92 *August 2017 - Present*

Bachelor of Technology, Computer Science & Engineering, India | GPA 8.67/10 *July 2012 - July 2016*

TECHNICAL SKILLS & COURSEWORK

Languages: Python, Java, C, C++, SQL, Html, JavaScript
Databases: MySQL, SQLite
ML Technologies: Numpy, Pandas, Scikit-learn, Matplotlib, Tensorfow
Coursework: Artificial Intelligence, Statistical Machine Learning, Perception in Robotics, Intelligent & Assistive Robotics

WORK EXPERIENCE

Software Engineering Intern | Rockwell Collins | Irvine, California *May 2018 - August 2018*

- Developed an android application for IFE which can auto-detect cast enabled monitors and play DRM protected media on it from personal devices without any internet connection.
  Technology Stack: Python, Java, Electron, Raspberry Pi, Android Studio

Programmer Analyst Trainee | Cognizant Technology Solutions | Kolkata, India *August 2016 - June 2017*

- Maintained and enhanced existing user validation & auditing system to fixing existing bugs, adding new functionalities and improving program performance.
  Technology Stack: Java Server Faces, Html5, JQuery, SOAP API

ACADEMIC PROJECTS

Roblocks: An End-to-End System for Programming Mobile Manipulator Robots | Thesis *Fall 2018*

- Developing a visual programming interface that will dynamically populate puzzle shaped blocks defining possible actions for a robot and allow users to write code by connecting them instead of typing.
  Technology Stack: Java, Html5, JQuery, AJAX, ROS, PDDL

Anomaly Detection | Statistical Machine Learning *Fall 2018*

- Developed a hybrid model from five different machine learning models with weighted polling to detect component failures in the Air Pressure System of heavy Scania trucks. Implemented various data cleaning methods to deal with the missing values in the dataset.
  Technology Stack: Python, Pandas, Scikit-learn, Matplotlib

Multi view 3D Object Reconstruction using Deep Neural Networks | Robotics *Spring 2018*

- Integrated ROS enabled 3D Recurrent Reconstruction Neural Network (3DR2N2) to generate 3D shape of an object from 2D images and calculated grasping positions on it.
  Technology Stack: Python, Numpy, Convolution Neural Network, Recurrent Neural Network

Smart Video Surveillance System using Deep Neural Network & POMDPs | Robotics *Spring 2018*

- Implemented a deep object detection network (YOLO) that captured object's movements in the current camera frame which then served as an evidence to a Partially Observable Markov Decision model for visual servoing.
  Technology Stack: Python, Java, OpenCV, Convolution Neural Network

Comprehensive implementation of AI methods in Pacman Gaming Environment | AI *Fall 2017*

- Implemented Pacman agent in an adversarial setting using DFS, BFS, UCS, A* search, Alpha-Beta pruning, Minimax, Value functions, model based and model free reinforcement learning algorithm.
  Technology Stack: Python, Tensorflow

PERSONAL PROJECTS | GITHUB

Developing a voice enabled calling application (AIY VoiceKit, Python, Android).

Developed a virtual math teacher that can ask and answer questions on basic addition, subtraction, multiplication and division (AIY VoiceKit, Python).

Built a Convolutional Neural Network to find a phone in an image with minimum amount of data to train on (training images = 130; Tensorfow, Python, Numpy, Matplotlib).

Implemented digit recognition on MNIST dataset using Convolution Neural Network (Python, Numpy, Tensorfow).
